ADMINISTRATIVE LAW

9 Newswander, Chad B.

Administrative character: hard and soft look considerations.

American Review of Public Administration, 45(6), 2015(N ov): p.746-759.

Managerial competence expressed in the promise of science provides administrators with a set of dispositions. In attempting to achieve such a character, the Supreme Court set up a hard look orientation that used rational means to justify the substance of administrative power. Even though this mode of operation grants legitimacy resulting from meeting a high threshold, it also began to cripple administrative reasoning and movement. When problems are multifaceted, administrative character must be given room to explore. Taking this into consideration, the court also established an alternative space rooted in a soft look that encouraged a different type of administrative character. It has done this by establishing the foundations of a legal framework that privileges deference, which allows for prudence to emerge. Rooted in classical origin and updated in modern parlance, prudence can be leveraged as a way to not only deal with questions of law but also with substance. - Reproduced.

ADMINISTRATIVE REFORM

10 Andrews, Matt

Doing complex reform through PDIA: judicial sector change in Mozambique.

Public Administration and Development, 35(4), 2015(Oct): p.288-300.

Many public sector reforms change governmental forms without improving functionality. Recent work suggests this is because countries adopt mechanisms that do not fit their contexts, without an effective adaptation strategy. The work posits that reforms could be more effective if they were introduced through more adaptive processes, like problem-driven iterative adaptation

(PDIA). This approach has deep roots in various literatures but many observers still ask how it actually works in practice. This paper responds to such question by describing an action research study where PDIA was used to facilitate process reform in Mozambique's judicial sector. It shows how the approach (i) revealed contextual factors that often limit reform success and (ii) fostered adaptive progress around these factors, towards a functional solution. - Reproduced.

11 Bersch, Katherine

The merits of problem-solving over powering: governance reforms in Brazil and Argentina.

Comparative Politics, 48(2), 2016(Jan): p.205-225.

12 Bertelli, Anthony M and Sinclair, J. Andrew
Mass administrative reorganization, media attention, and
the paradox of information.
Public Administration Review, 75(6), 2015(Nov-Dec):
p.855-866.

How does media attention influence government decisions about whether to terminate independent administrative agencies? The authors argue that an agency's salience with partisan audiences has a direct effect, but a high media profile can disrupt normal government monitoring processes and obfuscate termination decisions. This argument is evaluated in the context of a recent mass administrative reorganization by the British coalition government using probit and heteroscedastic probit regression models. The evidence suggests that termination is less likely for agencies salient in newspapers popular with the government's core supporters but not those read by its minority coalition partner. We also find that agencies with greater overall newspaper salience as well as younger agencies have a higher error variance. -Reproduced.

13 Brinkerhoff, Derick W. and Brinkerhoff, Jennifer M.
Public sector management reform in developing countries:
perspectives beyond NPM orthodoxy.
Public Administration and Development, 35(4), 2015(Oct):
p.222-237.

With the passage of time and the accumulation of experience, the hegemony of the New Public Management (NPM) (now no longer new) as the dominant approach to public sector reform has weakened, particularly as applied to developing countries. What alternative frameworks for theory and practice offer insights and guidance beyond the NPM orthodoxy? This article offers some answers to this question and draws upon the

contributions to this special issue to explore four analytic strands that constitute post-NPM approaches to reform: political economy and institutions, public management function over form, iterative and adaptive reform processes, and individual and collective agency. The discussion highlights the significance of functional mimicry, the challenges of measuring results, the practical difficulties in achieving contextual fit and accounting for the inherent uncertainty in reform processes, the tensions between ownership and outside expertise, and unpacking political economy dynamics within various micro-contexts and across regime types. - Reproduced.

14 Brinkerhoff, Jennifer M.

Agency in institutional reform: creating the Ethiopia commodities exchange.

Public Administration and Development, 35(4), 2015(Oct): p.301-314.

The role of agents and agency in institutional reform literature has largely been underplayed and decontextualized, even being described as a black box. Despite calls for linking individual agency with organizational and societal analysis, the specific contours of agency remain under-theorized. This paper presents and illustrates a framework for institutional entrepreneurism, outlining the essential role and specific actions institutional entrepreneurs can contribute to introducing, promoting, and crystallizing institutional reforms. The framework identifies how institutional entrepreneurial actions shift in their targets and responses as the resource needs change in different stages of the reform process. Using the example of establishing the Ethiopia Commodities Exchange (ECX), I illustrate each stage of institutional entrepreneurial action. The ECX experience illustrates institutional entrepreneurs as networked, political actors, who announce institutional reforms through cultural efforts that make it as easy as possible for stakeholders to comply with proposed reforms. The who and the how of agency may shift through the stages of institutional reform. The ECX experience confirms that institutional reform is political and requires engaging with both macro level and micro-level politics and power. - Reproduced.

15 Cummings, C.

Fostering innovation and entrepreneurialism in public sector reform.

Public Administration and Development, 35(4), 2015(Oct): p.315-328.

16 Drew, Joseph and Dollery, Brian

Less haste, more speed: the fit for the future reform program in New South Wales local government. Australian Journal of Public Administration, 75(1), 2016 (Mar): p.78-88.

In August 2011 the New South Wales (NSW) Government established the Independent Local Government Review Panel to examine the options for improving the sustainability of the NSW local government sector. In October 2014 the NSW Government set out its response in its Fit for the Future reform program. This paper provides a critical assessment of the Fit for the Future program. We show that it contains errors, relies on unreliable data, and neglects important factors, which may be ascribed to the haste with which it has been constructed. This could have serious consequences given the potential impact the Fit for the Future program will have on NSW local government. We thus conclude that it would be prudent to address these matters before proceeding further with the program. - Reproduced.

17 Levy, Brian

Governance reform: getting the fit right. Public Administration and Development, 35(4), 2015(Oct): p.238-249.

This article builds on recent literature on political settlements and new institutional economics to suggest a good-fit alternative to the best practices approaches that until recently have dominated efforts at governance reform. It introduces a typology for distinguishing systematically among different groups of countries and maps the typology to four alternative approaches to governance reform. The article then offers a set of "good fit" hypotheses as to the conditions under which each of the approaches is likely to be effective. - Reproduced.

Eastern Anthropologist, 68(4), 2015(Oct-Dec): p.592-603.

CIVIL SERVICE

77 Alcaras, Jean-Robert

The managerial conversion of senior civil servants: a convenient myth for the French local welfare state? International Review of Administrative Sciences, 82(1), 2016(Mar): p.190-207.

Has New Public Management really been rolled out homogenously across the board? Drawing on research into the viewpoints and practices of a particular category of senior civil servants in France (those in charge of local welfare policy), this article takes a critical look at this assumption of convergence towards NPM. Behind a discursive convergence that remains superficial and partial, the reality tends more towards heterogeneous and contextualized appropriations of New Public Management benchmarks often leading to new forms of bureaucracy. In a context where the position of public officials has been weakened, management seems to have been adopted as a source of professional legitimization. By adopting this very useful managerial posture, these civil servants find comfort in perpetuating the myth of convergence. -Reproduced.

78 Terman, Jessica

A state-level examination of bureaucratic policymaking: the internal organization of attention. American Review of Public Administration, 45(6), 2015(N ov): p.708-727.

Bureaucrats have considerable formal policymaking authority. Yet policymaking discussions often overlook the role that bureaucrats play in the policy process. Current theories suggest that bureaucratic policymaking outputs are shaped largely by political signals sent by elected officials. While these external influences are crucial, current theories understate the role of internal organizational dynamics. This study builds on the bureaucratic response and organizational attention

literatures to differentiate internally organized attention from externally organized attention in public agencies. It then conceptualizes two ways that public managers can internally organize agency attention to influence formal bureaucratic policymaking in the context of contracting and procurement. This study adds to the public management literature by showing how internal managerial strategies and activities can influence bureaucratic outputs. - Reproduced.

79 Thakur, R.N.

Civil service training: the changing ahead (note). Indian Journal of Public Administration, 61(4), 2015(Oct-Dec): p.730-735

Training is a process of socialisation and professionalisation of the Civil Service. While referring to the British and French civil service training, this article emphasises the civil service training in India, its changing need with reference to the emerging problems and challenges faced by the Indian society in which administrators act as change agents. - Reproduced.

80 Wenene, Mary Theopista , Steen, Trui and Rutgers, Mark R. Civil servants perspectives on the role of citizens in public service delivery in Uganda.

International Review of Administrative Sciences, 82(1), 2016(Mar): p.169-189.

In this article we study civil servants perceptions about the role of citizens in the provision of public services in Uganda. In other words, we examine the views of those who deliver civil services regarding the actual and desired influence of service recipients. An empirical study was conducted focusing on the health and education sectors in Uganda. It is concluded that due to a number of tensions regarding the role of the citizen in Uganda, civil servants feel that service recipients are not yet adequately engaged in the demand for and delivery of quality public services. More effective public service delivery in Uganda cannot be achieved without the development of a culture that supports the building of capacity at all levels, including the community and individual service recipients. - Reproduced.

CIVIL SOCIETY

81 Sharma, L.N.

Concept, structure and functions of civil society. Indian Journal of Public Administration, 61(4), 2015(Oct-Dec): p.601-610.

The article elucidates the concept of civil society as it first emerged in Europe and then started being used elsewhere since the 17th Century in the modern age. It exemplifies the structures of the civil society with particular reference to India and delineates its function of mediation between citizens and the government. It examines how far the civil society has been successful in strengthening democracy and serving the public causes with which its members are intimately concerned. It also suggests how far the civil society can and should seek to make people lead better lives and control their governments. - Reproduced.

 Mimicry, persuasion, or learning? the case of two
 transparency and anti-corruption policies in Romania.
 Public Administration and Development, 35(4), 2015(Oct):

p.277-287.

Public sector reforms in developing countries based on global best practices have come under increasing criticism in the development community. The charge is that in trying to increase international legitimacy, governments copy institutional forms that are not suited to the local context. Yet, such mimicry is not the only driver of international policy diffusion. Domestic policy entrepreneurs learn from experiences of other countries and invoke global norms and values in advancing their preferred policy options. Pressures for mimicry can help such policy entrepreneurs counter resistance from domestic elites, especially in the case of value-based policies, such as transparency and anti-corruption policies. The cases of the Freedom of Information Act and the Asset Disclosure Laws in Romania are used to illustrate how external pressure for legitimacy can empower domestic policy entrepreneurs and facilitate a process akin to problem-driven iterative adaptation advocated by critics of isomorphic mimicry in public sector reform. - Reproduced.

 See no evil, hear no evil? assessing corruption risk
 perceptions and strategies of Victorian public bodies.
 Australian Journal of Public Administration, 75(1), 2016
 (Mar): p.3-17.

This paper critically examines qualitative survey data from 36 Victorian public sector bodies on their perceptions of corruption risks, and strategies to mitigate these risks, as well as the integrity mechanisms in place. The findings indicate that even though corruption does not seem to be prevalent in these bodies it is not on their radar either, though fraud prevention was significantly present. The paper identifies international best practices of integrity management and inculcation of public service ethos in developed countries, and stresses three vital elements or pillars that combine both the values and compliance based approaches. These pillars are as follows: (1) specific corruption prevention programs and strategies that are additional to but complement existing anti-fraud programs (2) targeted anti-corruption training, both for employees and for the public; and (3) effective

leadership engagement and commitment to an ethical culture (Tone at the Top). - Reproduced.

DEVELOPMENT ADMINISTRATION

126 Carey, Gemma and Harris, Patrick

Developing management practices to support joined-up governance.

Australian Journal of Public Administration, 75(1), 2016 (Mar): p.112-118.

Various forms of boundary-crossing practices continue to proliferate in public management and public service provision (i.e. activities that require engagement and collaboration across sectors, institutions, and organisations). Yet the dynamic nature of this type of joined-up working is proving to be a major management challenge. In this paper, we bring a number of concepts to bear on the management of joined-up and cross-boundary working in public management of complex social issues. Firstly, we present the concept of adaptive management, which we draw from field of environmental policy and planning (and human ecology). Secondly, we introduce a rethinking of the role of policy targets using a complexity lens. These concepts are integrated into a practice heuristic (or framework) designed to assist cross-boundary policy implementation in real-world settings. We argue that adaptive management approaches may have significant utility for ensuring effective governance in uncertain environments. - Reproduced.

Learning lessons from disasters: alternatives to Royal Commissions and other quasi-judicial inquiries. Australian Journal of Public Administration, 74(4), 2015 (Dec): p.495-508.

With over 50 inquiries in 75 years, Australian communities continue to suffer from the impact of extreme events whether fires, floods, cyclones, or other emergencies. Einstein is reported to have said 'Insanity: doing the same thing over and over again and expecting different results'. The insanity may not lie in responding to fires and emergencies the same way, and facing another tragedy, but in reviewing these events in the same way and expecting the quasi-judicial process to identify how to prevent the next one. This paper argues that it is time to do the post-event review in a different way and suggests some possible options for new approaches to learning lessons from tragedy. - Reproduced.

Serving clients when the server crashes: how frontline
workers cope with e-government challenges.
Public Administration Review, 75(6), 2015(Nov-Dec):
p.817-827.

Implementing e-government in the contemporary American state is challenging. E-government places high technical demands on agencies and citizens in an environment of budget austerity and political polarization. Governments developing e-government policies often mobilize frontline workers - also termed street-level bureaucrats - to help citizens gain access to services. However, we know little about how frontline workers cope in these challenging circumstances. This article fills this gap by examining frontline workers implementing the Patient Protection and Affordable Care Act. Based on a qualitative analysis, the authors find that frontline workers move toward clients when coping with stress: they bend the rules, work overtime, and collaborate in order to help clients. They are less inclined to move away or move against clients, for instance, through rigid rule following and rationing. In other words, frontline workers try to serve clients, even when the server crashes. Frontline workers, then,

can play a vital role in the successful implementation of e-government policies. - Reproduced.

The impact of fiscal crisis on decision making processes in European governments: dynamics of a centralization cascade.

Public Administration Review, 75(6), 2015(Nov-Dec): p.842-852.

The Great Recession resulted in fiscal crises for governments across the Western world. Significant cuts in government programs were initiated as many governments scrambled to reduce their growing budget deficits. This article explores how European governments reacted during the recent crisis. In particular, the authors focus on the interlinkages between shifts toward more centralized decision making. The article uses a survey of thousands of public sector executives in 17 European countries. The authors find evidence of a centralization cascade, such that centralizing one element of the decision-making process leads to greater centralization throughout the system. Results also show that having a high number of organizational goals and facing clear sanctions for failing to achieve goals lead to greater centralization, but greater organizational commitment reduces the need to centralize. - Reproduced.

 Why people co-produce within activation services: the
 necessity of motivation and trust û an investigation of
 selection biases in a municipal activation programme in
 the Netherlands.
 International Review of Administrative Sciences, 82(1),
 2016(Mar): p.69-87.

Activation services that aim at re-employment of jobseekers often suffer from creaming, i.e. selecting those who have the best qualifications to re-enter the labour market. New ways of delivery, such as coproduction, are supposed to be less subject to selection mechanisms. To analyse whether co-produced activation programmes suffer from selection biases, participants in a local innovative activation programme (n?=?60) were compared to non-participants (n?=?18). Participants are more motivated in general and showed higher levels of generalized, municipal and interpersonal trust. Moreover, high general motivation relates to high levels of trust and perceived control. This indicates that there is indeed a selection bias within co-produced activation programmes. Therefore, it remains uncertain whether coproduction is more successful in dealing with creaming than common types of service delivery. - Reproduced.

 Subsidiarity in the Australian public sector: finding
 pragmitism in the principle .
 Australian Journal of Public Administration, 74(4), 2015
 (Dec): p.419-434.

The principle of subsidiarity, commonly understood as the view that authority should be exercised by the lowest level of government competent to do so, is a key concept in understanding and reforming Australian federalism. In this article, we explore the way in which citizens with experience working in government react to the principle, and highlight that those with experience at different levels of government approach and value subsidiarity differently. Based on mixed-methods evidence, we propose that a pragmatic, problem-oriented approach to federalism and subsidiarity may cut through these differences, and allow policymakers to come together under a unified understanding of subsidiarity. - Reproduced.

Separating sovereignty and sharing problems: Australian federalism and the European Union. Australian Journal of Public Administration, 74(4), 2015 (Dec): p.406-418.

From its origins in the study of the European Union, the concept of multi-level governance (MLG) can contribute to understanding the capacity for, and barriers to, dynamism and innovation in the Australian federation. By placing the quality of the interactions between different

jurisdictions at different spatial scales at the centre of analysis, the concept helps to underpin the argument that constitutional change in formal roles and responsibilities is not sufficient, and may not even be necessary, for reform of Australian federalism. The following steps are made in the paper. The first defines the main elements of MLG and its advantages for extraconstitutional analysis of multi-level policy coordination. The characteristics of MLG observed in contemporary Australian federalism are set out next. The final section presents a critique of the current Reform of the Federation White Paper. - Reproduced.

FINANCIAL ADMINISTRATION

263 Bowrey, Graham, Smark, Ciorstan and Watts, Ted Financial accountability: the contribution of Senate estimates. Australian Journal of Public Administration, 75(1), 2016 (Mar): p.28-38.

One of the key financial accountability processes in the Australian system of government is the Budget Estimates hearings of the Senate Legislation Committees. These Estimates hearings focus on undertaking a detailed examination of the proposed annual expenditure of government departments and authorities outlined in the Appropriation Bills. The hearings also provide participating Senators the opportunity to question senior public sector managers about the delivery of government services. This paper, through the application of content analysis of the Hansard transcripts of a government organization, explores the extent to which the Estimates hearings contribute to the financial accountability

process of the Senate Legislation Committees and correspondingly the accountability of Parliament and government. The key findings of this study of the selected Hansards is that the Senate Legislation Committees Estimates hearings do contribute to the discharge of both Parliament's and the Government's financial accountability. - Reproduced.

GOVERNORS

285 Pankaj, Ashok K.

Governor in Indian federal constitutions - 1: Constitution Assembly debates revisited. Indian Journal of Public Administration, 61(4), 2015(Oct-Dec): p.611-632.

This article revisits the Constituent Assembly Debates, and argues that the intention of the Constitution makers was to make provisions for Governor in sync with a fuller federal Constitution, at least the original proposal suggests so. The Report of the Provincial onstitution Committee had provided for an elected Governor who will have security of tenure and discretionary special responsibilities to prevent any grave menace to the peace and tranquillity of the province or any part thereof. The provision of elected Governor was strongly posed by the then Premiers of provinces. Strong and independent position of Governor was also contested by the protagonists of a strong entre. Consequently, the provision of elected Governor became appointed and Governor lost the security of tenure that became subject to the pleasure of the President. However, his special responsibilities were retained in the shape of President's rule in a State. Nevertheless, the Assembly intended the Governor as a constitutional head of a State who would be a person of undoubtful ability and position in public life who at the same time has not been mixed up in provincial party struggle or factions. - Reproduced.

American Review of Public Administration, 45(6), 2015(N ov): p.674-688.

Contracting for complex human services has presented the field of public administration with a number of difficult and enduring questions. Emergency medical services (EMS) provide an ideal arena for further investigation into this topic. We utilize a relational contracting framework to examine key questions associated with trust in the collaborative provision of EMS. The findings indicate that contract specificity, provider performance, and administrative professionalization influence trust in these relationships.— Reproduced.

Parallel systems and human resource management in India's
public health services: a view from the front lines.
Public Administration and Development, 35(5), 2015(Dec):
p.372-389.

There is building evidence in India that the delivery of health services suffers both from an actual shortfall in trained health professionals and from unsatisfactory results of existing service providers working in the public and private sectors. This study focuses on the public sector and examines de facto institutional and governance arrangements that may give rise to welldocumented provider behaviors such as absenteeism that can adversely affect service delivery processes and outcomes. We analyze four human resource management (HRM) subsystems: postings, transfers, promotions and disciplinary practices from the perspective of front-line workers - physicians working in rural healthcare facilities operated by two state governments. We sampled physicians in one post-reform state that has instituted HRM reforms and one pre-reform state that has not. The findings are based on both quantitative and qualitative measurements. The results show that formal rules are undermined by a parallel modus operandi in which desirable posts are often determined by political connections and side payments. The evidence suggests an institutional environment in which formal rules of accountability are trumped by a parallel set of accountabilities. These systems appear so entrenched that reforms have borne no significant effect. - Reproduced.

Co-production in healthcare: rhetoric and practice. International Review of Administrative Sciences, 82(1), 2016(Mar): p.150-168.

Co-production in healthcare is receiving increasing attention; however, insight into the process of coproduction is scarce. This article explores why hospitals involve patients and staff in co-production activities and hospitals experiences with co-production in practice. A qualitative study with semi-structured interviews (N?=?27), observations (70 hours) and document analysis was conducted in five Dutch hospitals, which involved patients and staff in order to improve services. The results show that hospitals have different motives to involve patients and staff and have adapted existing methods to involve patients. Interestingly, areas of improvement proposed by patients were often already known. However, the process of co-production did contribute to quality improvement in other ways. The process of co-production stimulated hospitals thinking

about how to realize quality improvements. Quality improvements were facilitated by this process as seeing patients and hearing their experiences created a sense of urgency among staff to act on the improvement issues raised. Moreover, the experiences served to legitimatize improvements to higher management bodies. - Reproduced.

The co-production of campus safety and security: a case study at the University of Georgia.

International Review of Administrative Sciences, 82(1),
2016(Mar): p.110-130.

Campus safety and security is a salient issue and an area of increasing concern facing educational institutions in the United States. Yet little is known regarding ongoing efforts and resulting difficulties to co-produce campus safety and security. This article contributes to the literature on co-production by examining student and campus police officer perceptions of the professional service user relationship in the context of campus safety and security. Findings suggest that demographic and contextual factors shape user and professional perceptions of their relationship in different ways, and that these perceptual differences affect efforts to co-deliver services. - Reproduced. - Reproduced.

 Housing in a federation: from wicked problem to
 complexity cascade?
 Australian Journal of Public Administration, 74(4), 2015
 (Dec): p.448-466.

The Commonwealth's periodic attempts at housing and urban policy reform since the 1940s have been made in the face of a federal structure that allocates responsibility for such matters to the states. This paper explores the experience of federal governments since the 1940s, considering the various styles of political leadership, varying ways in which the problem has been framed, and differing policy settings that have been employed in resolving policy challenges. The historical narrative clarifies phases of active engagement and reaction, linking these to fiscal asymmetry and distribution of federal state responsibilities, historical gateway events, and transitions in policy paradigms. We argue that housing is a perpetual concern (both a basic need and an aspirational objective) and is so integrally related to other policy domains in which decisions may have unintended consequences for housing that it is never conclusively resolved. The complexity (and uncertainty) consequent upon these inter -relationships ensures that housing remains a wicked problem. The visual metaphor of a complexity cascade, however, may assist a more nuanced appreciation of the direction of policy travel. -Reproduced.

HUMAN RIGHTS VIOLATIONS

396 Spreading the truth: how truth commissions address human rights abuses in the world society.

International Sociology, 30(6), 2015(Nov): p.654-673.

This research examines why truth commissions have proliferated worldwide and become a standard component of the transitional justice repertoire, in spite of a lack of evidence that the institution is viable or beneficial in diverse contexts. Drawing on world society theory, the article argues that rationalized myths about the value of truth telling have driven the diffusion of truth commissions. Data from 34 founding charters reveal that a commission's objectives do not necessarily correspond with the precipitating conflict or political transition, but are highly shaped by three external channels of influence: the United Nations, international consultants, and regional proximity. By identifying distinct actors that have developed and promoted different rationalized myths, the article refines world society theory's tendency to present routine uninhabited diffusion of a single institutional model. Instead, truth commissions provide evidence of the uneven spread of a multifarious

global institution. - Reproduced. IDENTITY

409 Davis, Glyn and Silver, Helen

Intergovernmental relations and the role of senior officials: two case studies and some lessons learned. Australian Journal of Public Administration, 74(4), 2015 (Dec): p.467-483.

The Council of Australian Governments (COAG) is the most important forum for intergovernmental relations in Australian federalism. Though decision-making processes in intergovernmental relations in Australia have been well documented in recent research, the role of senior officials within the COAG process is less often studied. Though not the primary decision makers, this article suggests senior officials play a significant role in

intergovernmental outcomes through advice provision and bargaining in the margins of COAG. Case studies of the National Competition Policy and the development of the Intergovernmental Agreement on Federal Financial Relations suggest both the contribution of senior officials and the constraints on their contribution to intergovernmental decision making. - Reproduced.

LEADERSHIP

458 Jacobsen, Christian Botcher and Andersen, Lotte Bogh Is leadership in the eyes of the beholder: a study of intended and perceived leadership practices and organizational performance. Public Administration Review, 75(6), 2015(Nov-Dec): p.829-841.

> Leadership is a matter of both intentions and perceptions, which do not necessarily always match. Because employees motivation and commitment are only affected by leadership if they notice it, employeeperceived leadership is expected to have a stronger correlation with organizational performance than leaderintended leadership. This expectation is tested for transformational and transactional leadership, as both types of practices are expected to increase performance. Using a sample of 1,621 teachers and 79 Danish high school principals, the authors find that leader-intended and employee-perceived transformational and transactional leadership are only weakly correlated and that only employee-perceived leadership practices (both transformational and transactional) are significantly related to objectively measured school performance. The results show that it is important to distinguish between intended and perceived leadership and that leaders should be aware of how their practices are perceived. -Reproduced.

Can't get no satisfaction? the association between
community satisfaction and population size for Victoria.
Australian Journal of Public Administration, 75(1), 2016
(Mar): p.65-77.

Traditionally, the problem of determining the optimal size in local government has been empirically assessed by estimating the relationship between population size and the costs of services (usually measured in terms of per capita expenditure). These studies, however, have proved largely inconclusive. In comparison, an empirical analysis based on the relationship between the size of government and community satisfaction offers a potentially fruitful contribution to the debate regarding the optimal size of local government. However, to date, few studies have followed this approach. We therefore contribute to this literature by exploring the relationship between population size and community satisfaction for Victorian councils. Our findings provide evidence of an inverted U-shaped relationship, which predicts low community satisfaction at very large and very small population sizes. - Reproduced.

473 Drew, Joseph and Dollery, Brian
How high should they jump? an empirical method for
setting municipal financial ratio performance benchmarks.
Australian Journal of Public Administration, 75(1), 2016
(Mar): p.53-64.

Heightened concerns regarding the financial sustainability of local councils have resulted in an increasing reliance by municipal regulators on financial ratio performance benchmarking. However, these benchmarks

are often assigned without explicit justification and despite a paucity of empirical evidence. Furthermore, regulators typically allocate a single performance benchmark across an entire local government system despite the fact that individual councils may face entirely different operating environments. Failure to take account of the environmental challenges facing councils can result in inappropriate or unattainable performance benchmarks that may give rise to unintended consequences, such as the well-documented threshold effects. To address this problem, we develop an empirical method for allocating performance benchmarks with respect to the current level of performance and environmental constraints facing individual local authorities. We demonstrate this technique in a case study using data drawn from New South Wales local authority operating ratios. - Reproduced.

Is there a case for mandating directly elected Mayors in
Australian local government? lessons from the 2012
Queensland local government elections.
Australian Journal of Public Administration, 74(4), 2015
(Dec): p.484-494.

A 'semi-executive' model for Australian mayors, inclusive of direct election, is presently being explored in the Australian local sector (see, in particular, Sansom, 2012). This paper takes advantage of the differences across Australia's federation to examine the recent experience of directly elected mayors in Queensland, especially the results of local government elections held in 2012. It is argued that several factors contributed to the high turnover rates of both mayors and councillors, including the 2012 Queensland state election and the 2008 amalgamation process. However, the requirement for directly elected mayors was an important factor contributing to what the Local Government Association of Queensland (LGAQ, 2012, 12) described as a 'significantly high' proportion of 'corporate knowledge' being lost. Moreover, the direct election of mayors, in particular those charged with 'semi-executive' authority, is fraught with problems and thus should not to be implemented in all Australian local government systems. - Reproduced.

475 Hulst, Rudie, Mafuru, Wilhelm and Mpenzi, Deogratias Fifteen years after decentralization by devolution: political-administrative relations in Tanzanian local government.

Public Administration and Development, 35(5), 2015(Dec): p.360-371.

One of the professed goals of the 1998 Tanzanian Local Government Reform Program, entailing substantial decentralization, was to provide for a democratic administrative set up in local government. Elected local councils were invested with responsibilities for a wide range of policy sectors and services; the local administrative staff, formerly recruited and instructed by central government, would be appointed by and accountable to the local councils. A well-functioning local politico-administrative system was considered paramount to improve service delivery and ensure control of decision making by the local community. This article reports on research into the relations between councilors and administrators in two Tanzanian municipalities. Overall, these relations were found to be tense and full of discordance, caused by clashing role perceptions and mutual distrust. The research suggests that the main factor underlying the behavior and attitudes of councilors and administrators is the very system of public administration, which ù despite the ambitions expressed in the Local Government Reform Program ù remains very centralistic in character.

476 Rao, D.V.

Municipal cadres in Telangana - a case study. Indian Journal of Public Administration, 61(4), 2015(Oct-Dec): p.670-680.

Jawaharlal Nehru National Urban Renewal Mission (JNNURM) which was launched by Government of India during 2005 for integrated development of Urban Local Bodies (ULBs) envisaged infrastructural services and reforms. One of the reforms was creation of cadre of municipal staff for different disciplines and it was expected to lead (i) ULBs to have full- time staff with specialised skills within the hierarchy of municipal setup; (ii) clear career-growth path; and (iii) experience-sharing across cities through movement of personnel. Telangana State has been created as the 29th State in India in June, 2014. It has been carved out of Andhra Pradesh. The municipalities in Telangana are governed under Andhra Pradesh Municipalities Act, 1965. Well-established municipal cadres exist in Telangana. As per the Municipal Act, a municipality has to perform various functions through multiple functionaries. There is well- structured functional hierarchy (staff model) in the municipal system in the State. There are three services which cater to the personnel requirements of municipalities in Telangana, viz. (i) State Service, (ii) State Municipal Service, and (iii) Municipal Service. Under State Service, senior officers working in municipalities like Commissioner, Municipal Engineer, Municipal Health Officer and Town Planning Officer belong to this service. They work both in municipalities and

government departments. Secondly, middle-level officers or employees of municipalities in the State are constituted as State Municipal Service with a common seniority to make them eligible for various posts in municipalities across the State. All other posts belong to Municipal Service. They are basically in the lower level of hierarchy and each Municipality is a unit of appointment. There is an organic linkage among the three Services. Further, Government has power to transfer any officer or employee of a municipality to the service of any other municipality. The reform contemplated under JNNURM aimed at creation of cadre of municipal staff for different disciplines in the state of Telangana and the outcomes expected of the reform are already in place in the State. - Reproduced.

- 478 Sinnewe, Elisabeth, Kortt, Michael A. and Dollery, Brian Is biggest best? a comparative analysis of the financial viability of the Brisbane city council.

 Australian Journal of Public Administration, 75(1), 2016 (Mar): p.39-52.

Structural reform through forced mergers has been a dominant feature of Australian local government for decades. Advocates of compulsory consolidation contend that larger municipalities perform better across a wide range of attributes, including financial sustainability. Although empirical scholars of local government have invested considerable effort into investigating these claims, no one has yet examined the performance of Brisbane City Council against other local authorities, despite the fact that it is by far the largest council in Australia. This paper seeks to remedy this neglect by comparing Brisbane with Sydney City Council, an average of six southeast Queensland councils and an average of 10 metropolitan New South Wales councils against four measures of financial performance over the period 2008û2011. - Reproduced.

479 Smith-Ruig, Theresa , Grant, Bligh and Sheridan, Alison Slow change at the top: 'old hands' and 'accidental executives' in New South Wales local government.

Australian Journal of Public Administration, 75(1), 2016 (Mar): p.89-99.

Scholars and practitioners alike have recognised that an increased role for women leaders in Australian local government would strengthen the sector, yet little

research to date has examined the career paths of nonelected officials. This article combines the gender in organisations literature with career theory to examine the career paths of 16 general managers (GMs) in New South Wales. We found that half the participants had linear career paths based entirely within local government and half had boundaryless careers originating outside the sector. This second cohort consisted overwhelmingly of women. Nevertheless, a high incidence of happenstance characterised both career types. Several participants saw themselves pitted against a gendered (i.e. male) group of old hands who were resistant to change being driven by accidental executives, a high proportion of whom were women. The findings have implications for a sector attempting to attract and retain skilled staff, particularly women. - Reproduced.

 Why people co-produce within activation services: the
 necessity of motivation and trust an investigation of
 selection biases in a municipal activation programme in
 the Netherlands.
 International Review of Administrative Sciences, 82(1),
 2016(Mar): p.69-87.

Activation services that aim at re-employment of jobseekers often suffer from 'creaming', i.e. selecting those who have the best qualifications to re-enter the labour market. New ways of delivery, such as coproduction, are supposed to be less subject to selection mechanisms. To analyse whether co-produced activation

programmes suffer from selection biases, participants in a local innovative activation programme (n?=?60) were compared to non-participants (n?=?18). Participants are more motivated in general and showed higher levels of generalized, municipal and interpersonal trust. Moreover, high general motivation relates to high levels of trust and perceived control. This indicates that there is indeed a selection bias within co-produced activation programmes. Therefore, it remains uncertain whether co-production is more successful in dealing with creaming than common types of service delivery. - Reproduced.

 American Review of Public Administration, 45(6), 2015(N
 ov): p.653-673.

While business and psychology researchers have strived to identify effective strategies to reduce occupational stress, public administration scholars have paid insufficient attention to this issue. This article examines the role of motivational bases in the stressor wellbeing relationship, a nascent research area in business and psychology, focusing on a particular type of motivation that is salient in public organizations: public service motivation (PSM). Based on a survey of 412 police officers from a large metropolitan city in eastern China, this study finds that PSM moderates the relationship between work stressors and individual wellbeing. Respondents with higher levels of PSM can better handle the increase of stressors so that their physical and mental wellbeing will decrease more slowly. Overall, respondents with higher levels of PSM tend to experience higher mental wellbeing but lower physical wellbeing than their low-PSM colleagues. - Reproduced.

518 Schott, Carina, Kleef, Daphne D. Van and Steen, Trui What does it mean and imply to be public service motivated? American Review of Public Administration, 45(6), 2015(N ov): p.689-707.

In public service motivation (PSM) literature, PSM is assumed to have a positive effect on performance. Even though frequently mentioned, this assumption has proved

difficult to verify empirically. In this article, we argue that individual interpretations of what it means to serve the public interest need to be considered to get a grip on the concept of PSM and its behavioral consequences. As interpretations of the public interest vary depending on the roles people occupy in society, so too does the meaning of PSM. A theoretical argument is developed that helps to clarify the meaning of PSM and its relationship with performance by introducing insights derived from identity theory. This is illustrated empirically by a study of veterinarian inspectors. The theoretical, empirical, and practical relevance of this new approach to PSM is pointed out.—Reproduced.

Regulating public services: how public managers respond
to external performance assessment.
Public Administration Review, 75(6), 2015(Nov-Dec):
p.867-877.

Performance management systems have become a key component of contemporary public administration. However, there has been only limited analysis of the social construction of performance by public managers who are subject to them. This article examines the ways in which public managers create, maintain, and disrupt performance management practices. The authors find that managers make external performance assessments perform for themselves by constantly negotiating boundaries in ways that combine bureaucratic and managerial rationales. The authors argue that the ways in which organizational boundaries are constructed are fundamental to understanding the success or failure of performance management systems and the transformation of managerial ways of thinking about performance into a logic of improvement through which contemporary public sector reforms become embedded. -Reproduced.

 Top 10 US municipal police departments and their social
 media usage.
 American Review of Public Administration, 45(6), 2015(N
 ov): p.728-745.

Social media technologies present a new way for government agencies to connect with, and potentially collaborate with, their residents. Police departments (PDs) are a setting ripe for use of social media as an extension of their community policing efforts. In this article, we explore the use of social media by PDs in the top 10 most populous U.S. cities. We analyze policeinitiated posts on Facebook, Twitter, and YouTube over a 3-month period to determine what accounts PDs use, if they use social media for information transmission or interaction, and if they use the accounts for dialogue that might make collaboration possible. We find that while PDs have and use social media, and while citizens are responsive, there is much less interaction in part due to nonresponsiveness of PDs themselves. We thus conclude that though the existence of some PD-resident dialogue is promising, very little was collaborative .-Reproduced.

Australian Journal of Public Administration, 75(1), 2016 (Mar): p.100-111.

Politicians and policy makers routinely engage with lobbyists and see them as crucial agents in the political process. But how much do we really know about the Australian lobby system? Although there are a range of reviews of lobby regulation schemes and discussions about the work of lobbyists, a comprehensive contemporary picture of the commercial lobbying system in Australia is missing. Using data from the federal lobby register, this article sets out to map the commercial lobbying scene at the national level. Using this as a backdrop, the article goes on to discuss what questions this raises and how we might develop a deeper understanding of the commercial lobbying system in Australia. - Reproduced.

PUBLIC ADMINISTRATION

588 Bovaird, Tony et al

Activating collective co-production of public services: influencing citizens to participate in complex governance mechanisms in the UK.

International Review of Administrative Sciences, 82(1), 2016(Mar): p.47-68.

Previous research has suggested that citizen coproduction of public services is more likely when the actions involved are easy and can be carried out individually rather than in groups. This article explores whether this holds in local areas of England and Wales. It asks which people are most likely to engage in individual and collective co-production and how people can be influenced to extend their co-production efforts by participating in more collective activities. Data were collected in five areas, using citizen panels organized by local authorities. The findings demonstrate that individual and collective co-production have rather different characteristics and correlates and highlight the importance of distinguishing between them for policy purposes. In particular, collective co-production is likely to be high in relation to any given issue when citizens have a strong sense that people can make a difference ('political self-efficacy'). 'Nudges' to encourage increased co-production had only a weak effect. - Reproduced.

589 Eijk, Carola Van and Steen, Trui
Why engage in co-production of public services? Mixing
theory and empirical evidence.
International Review of Administrative Sciences, 82(1),
2016(Mar): p.28-46.

Through processes of co-production, citizens collaborate with public service agents in the provision of public services. Despite the research attention given to co-production, some major gaps in our knowledge remain. One of these concerns the question why citizens engage in processes of co-production of public services. In this article, a theoretical model is built that brings the human factor into the study of co-production. The model

explains citizens engagement in co-production referring to citizens perceptions of the co-production task and of their competency to contribute to the public service delivery process, citizens individual characteristics, and their self-interested and community-focused motivations. Empirical evidence from four co-production cases in the Netherlands and Belgium is used to demonstrate the model's usefulness. The academic and practical relevance of the findings and suggestions for further research are iscussed. - Reproduced.

Good governance: performance values and procedural values
in conflict.
American Review of Public Administration, 45(6), 2015(N
ov): p.635-652.

Good governance codes usually end with a list of public values no one could oppose. A recurrent issue is that not all of these values however desirable they are can be achieved at the same time. With its focus on performance and procedural values of governance, this article zooms in on the conflict between two different types of values, signifying and exemplifying how output and outcome on one hand and the process of governance on the other may coincide or collide. The main research question is, What is the nature of value conflict in public governance and what specific conflicts between performance and procedural values do public actors perceive? A literature review and two case studies involving aldermen and the most senior public administrators in public governance set out to answer these questions. The most frequently perceived conflict is between lawfulness and transparency in procedure, on one hand, and the attainment of effectiveness and efficiency as performance values on the other.- Reproduced.

591 Guenoun, Marcel, Goudarzi, Kiane and Chandon, Jean Louis Construction and validation of a hybrid model to measure perceived public service quality (PSQ). International Review of Administrative Sciences, 82(1), 2016(Mar): p.208-230

Today, public organizations make extensive use of marketing methods and concepts to design, implement and assess the services they deliver to their beneficiaries. The quality of the services offered is at the heart of their concerns. Public sector marketing requires tools that are adapted to the specific characteristics of the context. The main contribution of this research is to propose the construction of a hybrid model to measure perceived public service quality (PSQ), mixing public and

private dimensions. It is based on a quantitative study conducted on a sample of 760 inhabitants of the French town of Besancon. - Reproduced.

594 Sicilia, Mariafrancesca et al
Public services management and co-production in multilevel governance setting.
International Review of Administrative Sciences, 82(1),
2016(Mar): p.8-27.

From a normative stance, co-production has been recommended at all stages of the public service cycle. However, previous empirical studies on co-production have neglected the question of how to make this happen. Moreover, little attention has been paid to how coproduction might occur in multi-level governance settings. The aim of this article is to fill these gaps, identifying triggers and organizational and managerial issues that could support the adoption of co-production in multi-level governance settings. The empirical analysis is based on a case study of services for autistic children. The findings highlight that coproduction was prompted by inter-organizational arrangements and that trust-building among the actors played a pivotal role in nurturing a co-production approach. - Reproduced.

595 Smoke, Paul

Managing public sector decentralization in developing countries: moving beyond conventional recipes. Public Administration and Development, 35(4), 2015(Oct): P.250-262.

Decentralization has become a nearly universal feature of public sector reform in developing countries, but it has unevenly met the often considerable and diverse expectations placed on it. This paper contends that the popular reform has been framed and assessed in standardized yet disjointed and incomplete ways that do

not offer a suitably robust basis for its effective application. Decentralization is a complex process that is pursued in variable environments, and superficial commonalities that suggest routine remedies are often overwhelmed by great heterogeneity in how it is perceived and unfolds in context. The drivers of diversity the country setting, national and local political and bureaucratic dynamics, available resources and capacities, and in some cases the role of aid agencies, among others shape what is intended and what is feasible relative to normative goals. Deeper attention to these factors can inform possibilities for more appropriate design and implementation. This paper discusses basic elements of the persistent decentralization challenge and outlines a preliminary approach to broaden contextual analysis and to define pragmatic ways to tap its potential more productively. - Reproduced.

596 Thijssen, Peter and Dooren, Wouter Van
Who you are/where you live: do neighbourhood
characteristics explain co-production.
International Review of Administrative Sciences, 82(1),
2016(Mar): p.88-109.

Co-production establishes an interactive relationship between citizens and public service providers. Successful co-production hence requires the engagement of citizens. Typically, individual characteristics such as age, gender, and income are used to explain why citizens coproduce. In contrast, neighbourhood-level variables receive less attention. Nevertheless, the co-production literature, as well as social capital and urban planning theory, provides good arguments why neighbourhood variables may be relevant. In this study, we examine the administrative records of citizen-initiated contacts in a reporting programme for problems in the public domain. This co-production programme is located in the district of Deurne in the city of Antwerp, Belgium. A multilevel analysis is used to simultaneously assess the impact of neighbourhood characteristics and individual variables. While the individual variables usually found to explain co-production are present in our case, we also find that neighbourhood characteristics significantly explain coproduction. Thus, our findings suggest that participation in co-production activities is determined not only by who you are, but also by where you live. - Reproduced.

597 Tuurnas, Sanna, Stenvall, Jari and Rannisto, Pasi-Heikki The impact of co-production on frontline accountability: the case of the conciliation service. International Review of Administrative Sciences, 82(1), 2016(Mar): p.131-149. Mixing of roles between professionals, volunteers and service users creates a new, complex environment in which to produce and deliver public services. In this kind of environment, the issues of accountability become ever more important. This article presents a qualitative case study of co-production between volunteers and professionals in the legally regulated restorative justice services in Finland. Theoretically, we draw together the concept of citizen co-production with the literature on street-level bureaucracy and accountability. As a result of the study, we can say that co-production between volunteers and professionals increases accountability ties. In particular, the meaning of process-centred accountability is salient in horizontal accountability relations. Thus, co-production as a governance arrangement changes the working culture of public service professionals. In the new partnerships, although not entirely horizontal, we can recognize a seed for cultural change for professionalized public service organizations.

598 Wright, Bradley E.

The science of public administration: problems, presumptions, progress, and possibilities. Public Administration Review, 75(6), 2015(Nov-Dec): p.795-805.

Nearly 70 years ago, Dahl noted the difficulty of constructing a science of public administration that was plagued by three interrelated problems: values, behavior, and culture. Underlying all three problems was the presumption that public administration could establish a set of universal principles independent of moral or political ends, individual human differences, or social influences. In discussing these three broad and easily accessible themes, Dahl did more than identify and critique the field's problems and presumptions. He also provided a road map to move the field forward and establish a science of public administration. Drawing on the framework provided by Dahl, this article argues that the field has made considerable progress in recognizing, if not addressing, each problem raised by Dahl. Even so, several current presumptions or omissions are also identified that, if challenged, can provide additional possibilities to advance science of public administration. - Reproduced.

PUBLIC DEBT

599 Megersa, Kelbesa and Cassimon, Danny
Public debt, economic growth, and public sector

management in developing countries: is there a link? Public Administration and Development, 35(5), 2015(Dec): p.329-346.

The article investigates whether differences in public sector management quality affect the link between public debt and economic growth in developing countries. For this purpose, we primarily use the World Bank's institutional indices of public sector management (PSM). Using PSM thresholds, we split our panel into country clusters and make comparisons. Our linear baseline regressions reveal a significant negative relationship between public debt and growth. The various robustness exercises that we perform also confirm these results. When we dissect our data set into weak and strong county clusters using public sector management scores, however, we find different results. While public debt still displayed a negative relationship with growth in countries with weak public sector management quality, it generally displayed a positive relationship in the latter group. The tests for non-linearity shows evidence of an inverse-U-shape relationship between public debt and economic growth. However, we fail to see a similar significant relationship on country clusters that account for PSM quality. Yet, countries with well-managed public sectors demonstrate a higher public debt sustainability threshold. - Reproduced.

PUBLIC EXPENDITURE

600 Bains, Simranjeet

Projected public expenditure on law enforcement agencies a case study of Punjab state.

Indian Journal of Public Administration, 61(4), 2015(Oct-Dec): p.714-729.

Public expenditure bears the responsibility for sustained economic development. Internal disturbances and high crime rates prove detrimental to the economic health of a nation. The present article is an attempt to ascertain the future trends of crime and public expenditure on police services in Punjab up till 2023. The total police expenditure is highly dependent on total crime in the Punjab state as the value of R2 is 0.885 and, moreover, both these variables have very high degree of correlation to the extent of 0.941. Lastly, some suggestions are made. A future research unit must be established at Punjab Police headquarters. Through the use of environmental scanning and analytical examining of the right data with appropriate forecasting methods, the future research unit may produce forecasts and policy

options that allow police department to surmount the odds of preferable future from among the many existing alternatives. - Reproduced.

India's 14th Finance Commission report: a SWOT analysis. Indian Journal of Public Administration, 61(4), 2015(Oct-Dec): p.633-640.

Designed to be credible discourse-documents on our country's inter-governmental polity, Finance Commission Reports are outcomes of an important constitutional duty. India's Fourteenth Finance Commission's Report is the latest of such reports and also the best so far--in terms of decisiveness, fairness and integrity of vision. Its 121 recommendations cover a full range of concerns on fiscal consolidation, exhibit a high trust-quotient on democratic decentralisation, and reveal deep insights on procedural reforms. The author has presented a clear and concise SWOT Analysis for our readers. - Reproduced.

PUBLIC POLICY

603 Weaver, R. Kent

Getting people to behave; research lesson for policy makers.

Public Administration Review, 75(6), 2015(Nov-Dec): p.806-816.

Many government policies attempt to change the behavior of individuals and businesses. This article argues that policy makers and administrators should (1) think comprehensively about the barriers that may keep target populations from complying with government policies, (2) match policy instruments to the most important barriers that inhibit compliance, and (3) take into account heterogeneity within the target population. Relatively nonintrusive strategies such as social marketing, providing resources to targets to help them comply, and manipulating options and defaults (choice architecture) are politically attractive but unlikely to secure

compliance when incentives for noncompliance are high. Based on the three basic principles outlined in the article, the author recommends strategies to increase compliance, including the use of leverage points and secondary targets, adjusting for unanticipated behavioral responses, and employing long-term, multiphase strategic management of behavior change initiatives. - Reproduced.

No child's play.

Economic and Political Weekly, 51(3), 2016(16 Jan): p.18-20.

ROADS

628 Varghese, Manoj

Building roads for rural prosperity. Kurukshetra, 64(6), 2016(Apr): p.23-25.

RURAL AREAS

629 Lewis, Blane D.

Decentralising to villages in Indonesia: money (and other) mistakes.

Public Administration and Development, 35(5), 2015(Dec): p.347-359.

Nearly 15?years after embarking on its large-scale decentralisation programme, Indonesia has decided to extend its efforts to the village level. Decentralising to villages is intended to improve service delivery performance at the lowest administrative tier and reduce social inequality and poverty. A number of potential difficulties with the design of Indonesia's nascent village decentralisation initiative have already become apparent. Methods used to allocate funds to villages are particularly problematic. Oddly, fund distribution procedures insist to a large extent on equal per village allocations, despite the significant heterogeneity of villages. And they ignore other sources of revenue to which villages have access. In the event, village

revenues will be very inequitably distributed: villages with high levels of poverty will receive less money than they need and villages with access to significant funding from oil and gas revenues will receive more than required. Also, village service responsibilities are unclearly defined, village financial management systems are inadequately prepared to handle large increases in funding, and mechanisms to monitor and control village spending are underdeveloped. These difficulties will severely constrain the achievement of official objectives and create further challenges for reformers in their attempts to combat corruption at the subnational level. - Reproduced.

RURAL DEVELOPMENT

630 Ajit Kumar

NIFTEM's village adoption programme: connecting college youth to the grass roots of the country for India's transformation.

University News, 54(5), 2016(1 Feb): p.153-156.

 Social security: a situational analysis of social
 pensions in Madhya Pradesh.
 Indian Journal of Public Administration, 61(4), 2015(Oct-Dec): p.681-696.

Delivery mechanism of basic social services has been one of the fundamental issues in determining the success or failure of poverty alleviation programmes, including social safety programmes in the country. Instead of problems of ineffective delivery of services being implicated at the level of macro policies, much of such problems rest at lower level of administration. This article looks at the problems related to the delivery of social security pensions in eight towns in MP. The article concludes that the responsibility of delivery of social security pensions should be given to local and decentralised structures with fundamental changes in the system of sanctioning and disbursement of pensions. - Reproduced.

WARFARE

747 Pardhasaradhi, Y.

The art of war and its relevance to modern strategic management and administration: a comparative appraisal of Sun Tzu with Kautilya and Clausewitz.

Indian Journal of Public Administration, 61(4), 2015(Oct-

Indian Journal of Public Administration, 61(4), 2015(Oct-Dec): p.641-657.

Sun Tzu's concepts are ageless. If you look hard enough, things such as strategic intelligence, planning, attention to detail, cunning, deception, and theories of leadership in which the leader earns authority with the followers, have universal value and are appropriate to any human arena and any period. If part of Sun Tzu's modern appeal derives from the constant search for any nuggets of intelligence that may give an organisation an edge over the competition, another part lies in the fact that The Art of War offers an opportunity to gain insights into the Oriental mind that do not come from someone with a modern axe to grind or reputation to make. This article gives a comparative appraisal of Sun Tzu's work with that of Kautilya, the great Indian philosopher and Carl Von Clausewitz, the great Prussian military strategist. - Reproduced.

Is community management an efficient and effective model of public service delivery? lessons from the rural water supply sector in Malawi: Malawi

Public Administration and Development, 35(4), 2015(Oct): p.263-276.

Reform of the rural water supply sector occurred widely in the 1990s, when many low-income countries replaced state-led service provision with decentralized community management in the hope of generating improved technical and financial performance. This article asks whether these expected benefits have materialized in practice, and whether community management has strengthened

institutional capacity at local, district and national level. Findings from a mixed-methods study in four districts of Malawi show that both technical and financial performance under community management is weak. Maintenance is rarely done, repairs are slow and substandard, and user committees are unable to collect and save funds: Average savings are just 2% of expected levels. Despite these failures, community management has worked for the state (and donors) as a means of offloading responsibility for public service provision. The article suggests elements of an alternative framework for rural water supply that would tackle the technical and financial failures of community management, and notes that efforts to promote local ownership in development must be undertaken with care. - Reproduced.

 Gender in public administration: looking back and moving forward.
 Australian Journal of Public Administration, 74(4), 2015
 (Dec): p.509-515.

In an online virtual issue, we explore the history of gender and feminism since AJPA. It is clear that two major silences exist in public administration concerning gender. The first is the place of women and gender equity within public service workforces. The second silence is the role that feminist theories could play in tackling contemporary public management challenges. We argue that there are particular contributions that feminist theories could make in relation to topics such as collaboration, boundary-spanning and skill requirements for future public sector workers. In this editorial we therefore look backwards and forwards, examining how female public sector workers are defined within state bureaucracy, and what feminism can bring to the functioning of this bureaucracy in the future. - Reproduced.

WOMEN IN POLITICS

788 Tiwari, Nupur

The dependency syndrome of inclusion: women in panchayats: evidence from a randomised survey of Bihar. Indian Journal of Public Administration, 61(4), 2015(Oct-Dec): p.658-669.

This article summarises some of the findings of a sample survey of Bihar on The impact of Political Reservations on Quality of Participation of Elected Women's Representatives. It is a part of the IDRC-NCAER1 research programme on decentralization and rural development. Using a data set collected from six districts across north Bihar, i.e. Sitamarhi, East Champaran, Katihar, Muzaffarpur, Purnia, and Supaul, it has tried to answer some questions related to the actual participation of elected women representatives in Gram Sabha meetings, issues they raised during those meetings, the type of development work they undertook, their role in increasing women's participation, their interface with officials and stakeholders, their interaction with local people across social categories, their awareness of health and education related facilities and issues, the identification of beneficiaries, and so forth. The present decision-making procedures do not allow a greater participation of women and the very absence of women at these levels thus leads to preservation and reinforcement of male-oriented and malebenefiting types of decisions. Women's low self-esteem at the household level and their new role in local politics where they are now expected to function as leader creates a contradiction. - Reproduced.

Women's health and rights in India: issues and concerns.

Indian Journal of Public Administration, 61(4), 2015(Oct-Dec): p.697-713.

The article examines the integral link between women's health, rights and the policies and programmes of the State regarding them. The analysis of the statistical profile of women from the Census of India, National Health Financing Scheme (NHFS) and the National Sample Survey (NSS) provides a comprehensive overview of the status of women in India. Each and every dimension of women's health and rights ranging from survival, mortality, marriage, fertility to work participation, domestic violence and political participation is highlighted here. The article draws attention not only to the statistical trends concerning women and girls in India, but also to the policy and programmatic factors that act upon, influence and sometimes impede womens access to their rights in each and every field. The complex interplay of socio-cultural ethos and the policy environment reflected in the attitudes and mindset of the government is brought to fore. The ideological consciousness of the government authorities reflects at times a patriarchal and instrumental approach towards women and girls. This makes it difficult for gendersensitive laws, policies and programmes to achieve their well-intended goals. The contradictions in certain policies and programmes in terms of achieving equality for women and girls in India is also discussed here. While the article specifically addresses the issue of women's health, it strives to use this aspect as an example to reveal how issues and concerns of women are interlinked in terms of their access and achievement of the goals of equality and nondiscrimination. The article underscores how the constitutional guarantees and rights for women and girls in India have become an exercise in rhetoric. This has been clearly revealed from the statistical profile of women in India and the disconnect between the implementation of policies and programmes from this glaring reality in the country. The article concludes that the implementation of policies and programmes need to be viewed from a gender lens. Women's concerns and issues need to be mainstreamed within the core policy discourses and policy environment of the country in order to create a democratic and egalitarian society. - Reproduced.

Who you are/where you live: do neighbourhood
characteristics explain co-production?
International Review of Administrative Sciences, 82(1),
2016(Mar): p.88-109.

Co-production establishes an interactive relationship between citizens and public service providers. Successful co-production hence requires the engagement of citizens. Typically, individual characteristics such as age, gender, and income are used to explain why citizens coproduce. In contrast, neighbourhood-level variables receive less attention. Nevertheless, the co-production literature, as well as social capital and urban planning theory, provides good arguments why neighbourhood variables may be relevant. In this study, we examine the administrative records of citizen-initiated contacts in a reporting programme for problems in the public domain. This co-production programme is located in the district of Deurne in the city of Antwerp, Belgium. A multilevel analysis is used to simultaneously assess the impact of neighbourhood characteristics and individual variables. While the individual variables usually found to explain co-production are present in our case, we also find that neighbourhood characteristics significantly explain coproduction. Thus, our findings suggest that participation in co-production activities is determined not only by who you are, but also by where you live. - Reproduced.
